

OPEROBOARD

Real-time Business Dashboards for JD Edwards EnterpriseOne

OperoBoard is the dedicated business dashboard platform for JD Edwards EnterpriseOne. It delivers instant insights and real-time KPIs from your JDE data – 100 % natively via the JDE AIS REST API. No direct database access, no bypassing of JDE security. Only decisions you can rely on.

- ✓ Native JDE AIS REST API
- ✓ 19 ready-to-use dashboards
- ✓ Dedicated customer instance
- ✓ Freely extensible

19 Dashboards
ready to deploy

5 BI modules
+ eInvoice

100 % AIS-native
no DB access

∞ Custom dashboards
on request

The Platform at a Glance

Five BI modules plus optional eInvoice analytics. One powerful platform.

supplier performance with
lead-time tracking.
Source: F4311.

eINVOICE

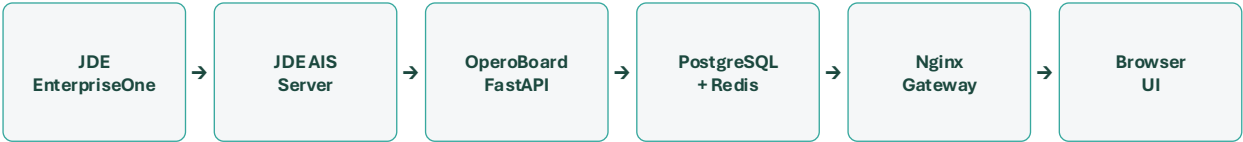

PREMIUM

Analytics module

EU-compliant XML processing,
3-way matching,
status tracking, workbaskets and
chains workflow.

Secure AIS Architecture

Real-time data without direct database access. Maximum security through native JDE AIS REST API.

How Customers Use OperoBoard

Real scenarios. Real impact.

Finance Controller

Clarity on financial performance – in seconds instead of weeks.

PROBLEM

The revenue report by customer group has been waiting three weeks with IT. Excel analyses are outdated by the time they're ready.

SOLUTION

OperoBoard shows revenue by customer group live – filterable, drillable, exportable as Excel. Alerts on critical KPIs via email or Teams.

RESULT

Faster decisions, no waiting for IT, more time for analysis instead of data preparation.

Inventory Manager

Optimise stock, reduce working capital.

PROBLEM

Too many items are sitting in some warehouses while others are stocked out. The full picture only shows at month-end – then it's too late.

SOLUTION

OperoBoard sends a Teams alert as soon as an item falls below the reorder point. Live overview of stock, movements, and availability across all locations.

RESULT

Lower stock costs, fewer shortages, happier customers – not just after month-end close, but every day.

Compliance Officer

Ensure data quality and audit readiness.

PROBLEM

The auditor asks for industry-specific analyses. IT has to laboriously build custom reports. This takes weeks.

SOLUTION

OperoBoard delivers audit-ready reports and drill-downs instantly. On request, Suppora develops industry-specific custom dashboards that integrate seamlessly into your instance.

RESULT

Higher audit confidence, full transparency, no more weeks of waiting for special analyses.

Choose the Right Edition

Flexible licensing for every organisation size. All prices are net, excluding VAT.

Starter

For small teams getting started.

690 €

per month

plus €3,999 setup
